Systemic Risk Management
Syllabus and reading list

Master in Finance, Insurance and Risk Management (Collegio Carlo Alberto)
Instructor: Nicola Borri, LUISS University (nborri@luiss.it)
A.Y. 2020–21
Last update: August 6, 2020

Short description  This course is a primer on systemic risk management. Systemic risk is the risk of a collapse of the entire financial system, possibly due to shocks that hit a specific financial institution (or a set of financial institutions), and then propagate to the entire system. It explains how systemic risk arises and impacts the financial sector, and presents different measures used to track and manage systemic risk, with simple MATLAB examples and applications.

Detailed syllabus and reading list  The main topics covered in the this short course are the following:

1. What is systemic risk? Freixas et al. (2015)’s chapters 1–2; The roots of the "clean up after bubbles" approach (The Economist)

2. Contagion: Freixas et al. (2015)’s chapter 5

3. How to measure systemic risk: Freixas et al. (2015)’s chapter 7; Banco Popular CoCo bonds wiped out after Santander takeover (The FT)

Additional non-required references  Acharya et al. (2017); Benoit et al. (2016); Gorton and Ordoñez (2016); Schularick and Taylor (2012); Duffie (2010)
